# Why netTerrain?

---

- **Hierarchical Diagrams:** they are the heart of the tool and don't require Visio or third-party applets.
- **The Best Usability:** we are obsessed. We believe a network documentation tool should maximize efficiency, not make things harder.
- **Powerful Object Modeling:** while other tools give you a fixed catalog of objects, we provide you with an entire modeling layer to help create your entities and rules in minutes.
- **Flexible and Object Oriented:** add or remove properties, change visual cues, create business rules and apply them to thousands of objects in seconds.
- **Custom Reporting:** create your own reports; don't depend on the reports that are provided to you.
- **Modern Platform:** netTerrain uses HTML5-based browser technology for a slick multi-user experience. No plug-ins, no clients.
- **Powerful, Worry-free Integration Toolkit:** that's right - we create connectors to any commercial tool you already have for increased automation at no cost, and we even learn how to create connectors to your own systems.
- **Feature-Rich Discovery:** we bring in any assets, ports, layer 3 links and much more using protocols such as SNMP or by tapping into your existing operational tools.
- **Granular Security:** 8 different access roles (AD and FIPS compliant) configurable on a per diagram basis puts you in control.

# Automate, Visualize and Optimize Your Data Center

- Space and Rack management
- Environmental (power and temperature) monitoring Discovery capabilities
- Asset management
- Cable and circuit management
- Capacity planning and forecasting
- Logical, virtual and application views
- Outside plant
- Robust discovery engine for devices, ports and links.
- Connectors to any third party data source for further automation.
- Physical and logical views of your networks, systems and apps.
- Inventory and Asset management for any IT and non IT elements.
- Cable and circuit management - from layer 0 to 7.
- Map VMs and application visualization.
- Capacity planning and forecasting with full dashboard and reporting engine.

netTerrain Enterprise addresses both Data Center Infrastructure Management and Network Documentation in one solution, combining the features found in both netTerrain DCIM and netTerrain Logical, to provide a visualization portal to both the physical and logical network infrastructure.

## netTerrain DCIM

Dynamic physical hierarchical and subcomponent diagrams of data centers, IT inventory and networks.

## netTerrain Logical

Data-driven documentation and visual diagramming of IT networks.

Bridge the gap between the Physical Data Center view and the Network view by simply double-clicking on a device in a network diagram to see where the device is located in a physical view (rack location, room, building) and vice versa. With netTerrain Enterprise, organizations can troubleshoot problems faster by understanding the topology and connectivity of the network and its physical location, resulting in service level improvements, better capabilities, lower costs, and the ability to optimize the overall design of the network.
