

netTerrain DCIM

Document, visualize, and understand your data center

Struggling to manage your growing data center's space and resources? Take control with netTerrain DCIM.

Fed up with unnecessary IT spending?

Control your inventory and eliminate redundant IT equipment and power expenses:

- View, and report on, asset and data center capacity with dashboard reports
- Maximize rack space with visualization and reporting
- Identify low-utilization servers and reuse or decommission them

Headaches from outdated diagrams and spreadsheets?

Automatically keep your data center information and diagrams up-to-date:

- Access diagrams from any web-based browser with views of rack space, power, and weight availability in a central repository
- Network information stays up-to-date with discovery, work order tasks, connectors, and team collaboration
- Import any data, in real-time (from your help desk, network management data sources, such as ServiceNow, Solarwinds Orion, Spectrum, AWS, VMWare, etc.)
- Keep network diagrams current with network discovery

Spending too much time and money on cabling?

Seamlessly track cable and circuit changes:

- Easily reserve ports, and locate available ones
- Visualize and document your cables: copper, fiber (and strands), cable trays, power cables, run traceroutes to view cable paths, and much more
- Understand and plan for capacity with reports that show use and available ports per rack, inter-rack cabling, and cabling

Fielding skyrocketing power costs...but limited by a lack of information?

Reduce energy expenditures up to 30%:

- Analyze server efficiency, power consumption, and data center thermal conditions with real-time rack views of power availability
- Lower costs by identifying excessive power consumption and ghost servers that draw power but don't perform tasks
- Increase rack density by creating power policies to oversubscribe racks

About Graphical Networks

Our team has managed networks and data centers ... and we've been creating IT visualization software for over two decades. We're obsessed with usability and crafting software that delivers on its promise of ROI.

Software Requirements:

MS SQL Server 2012, 2014, 2016 or 2019
Windows 2012, 2016, 2019 Server MS IIS
8.0 or better
NET Framework 4.5 or better

Minimum Hardware Requirements:

Intel i7 Processor
10GB Free Space
8GB RAM

Licensing Options:

On-premise yearly licenses
Perpetual licenses
netTerrain Cloud

With netTerrain, discovery and connecting to any data source is easy. Get actionable reports, dashboards, and insights in clicks.

"We needed to improve our Data Center operational efficiency and netTerrain got us there with an easy-to-use, cost-efficient and powerful solution. netTerrain allows us to build out environments ahead of time so planning and purchasing are simple. We have a clear picture of our infrastructure and can easily find things such as asset and port availability, connectivity, and location." - John Brauner, Systems Administrator
